ANNOUNCEMENT

Conference “Chemical elements in the Universe: origin and evolution’’
December 16 - 19, 2019, Bangalore, India

The objective of the conference is to explore and explain the origin, evolution, and abundance of all the chemical elements in the universe and hence, celebrate the 150 years of the periodic table.

One of the main purposes in organizing this conference is to highlight the work on chemical elements – their abundances and distribution in stars (including Sun), the Milky Way our Galaxy, ISM and other galaxies – done in the past and being pursued now in particular at IIA and India as well.

Discussion on solar and solar system abundances, standard cosmic abundances, sites for formation of chemical elements, abundance distributions in disk (thin, thick, ultra-thin) and halo of our Galaxy, nuclear processes for generation of elements, historical developments, etc. will be the theme of the conference.

On behalf of the SAC we are pleased to invite academic faculty and scientists, post-doctoral fellows, and PhD students to participate in this conference. We announce the submission of Registration form and abstract by November 22, 2019. For the online registration please visit www.iiap.res.in/PeriodicTable/
The guidelines and abstract template can be found on the above web page
For questions related to the Conference, you may contact us via e-mail:
